PREPARED FOR YOUR BUSINESS

The Omnikom setup

How your business gets onto the Omnikom platform: easy to find on Google and in AI answers, end to end

> Omnikom is a platform: your website, your enquiries and your search results in one place, run by us, with a dashboard for you. The setup is how you get onto it, and it buys one result: a business that customers can find online. We do the work, in seven steps: we measure where you stand, build your new website, have you approve every word that carries a promise or a legal duty, put it live on your own domain, get Google and the directories pointing to it, tune it for a week against real searches, and start getting trusted websites to mention you. Then the growth loop begins: we keep improving until your free search traffic is at its highest, and only then add paid ads. Your part is to give us access and your content, and to approve the wording. Every step ends with something you can see and check.

Prepared by Omnikom. Typical times; the setup moves as fast as approvals come back.

The seven steps at a glance

STEP	WHAT WE DO	WHAT YOU GET	TYPICAL TIME
1. Audit	We measure your website, your Google results, AI answers and your listings	A scored report in plain words	2 to 3 days
2. Draft	We design, write and build your new website	A private preview link	1 to 2 weeks
3. Review	We draft your legal pages and list every promise for you to check	A website you have approved in writing	depends on you
4. Launch	We put the website live on your domain, on the Omnikom platform, every page checked	Your new site, live, your dashboard login and the launch check report	1 to 2 days
5. Get listed	We submit your site to Google and Bing and link your profiles to it	Google and your directories pointing to you	first week after launch
6. Tune	We track your target searches and adjust the pages	A tracking report and the changes made	about 1 week
7. Mentions and links	We get trusted websites to name and link to you	A list of new mentions and links, and the next ones to win	starts after launch
Then: the growth loop	We keep improving until free search traffic is at its highest; ads only after that	A monthly report: what moved, what we changed, what is next	every month

01 / 07

Audit: we measure where you stand

- **We check your current website:** every page, how fast it loads on a phone, its technical health, and what Google and AI tools can and cannot read.
- **We map your searches:** what your customers type, who shows up for it today and where you appear.
- **We check AI answers:** whether ChatGPT, Gemini, Perplexity and Google's AI answers name you or your competitors.

- **We check your listings and reputation:** your Google profile, the directories of your industry, your reviews, and whether your name, address and phone match everywhere.
- **We compare you with your real local competitors** and count the websites that link to each of you.
- **We save a "before" snapshot,** so you can see the change later.

> **You get:** a scored report in plain words, every fact with its source and date, ending with what we fix first.

---

02 / 07

Draft: we build your new website

- **We write and design it from your own content:** your story, photos, reviews and services. Nothing is copied from your old platform or from anyone else.
- **We build a page for every place and service you want customers from** (for example one per city), each aimed at the searches people make there. These pages come from one system, so they stay consistent and fast as you grow.
- **We build it to an enterprise checklist:** fast on phones, readable by Google and AI tools (structured data, a clean sitemap, one address per page), accessible, and machine-checked before you see it.
- **We connect every form to your team:** each enquiry lands in the CRM inside your Omnikom dashboard, sorted by what the customer asked for, and alerts the people you choose.

> **You get:** a private preview link to click through on your phone and computer. It is hidden from Google until launch.

03 / 07

Review: you approve every promise before anything goes live

- **We draft your privacy policy and terms of use** for you and your lawyer to review.
- **We write the consent text on every form** (calls, texts, emails) and any disclosure your industry or licence requires. The website records exactly which wording each customer agreed to.
- **We give you a list of every promise on the site** (prices, timelines, guarantees, licences, awards, what a product does) with the page it sits on, and we ask permission before showing any reviewer's words.
- **You and your lawyer** read it, correct it and approve it. We change what you mark.

> **You get:** a website you have approved in writing. Nothing goes live before that.

04 / 07

Launch: we put it live on your own domain

- **We connect it to your own web address,** which stays yours. We change your domain settings only with your written OK, on a date you agree, and your email keeps working throughout.
- **We forward every old page address** to its new page, so the visibility you already have carries over.
- **We run the launch check on every page:** speed, code quality, security settings, structured data and the place and service pages. The website goes live only when the check passes.
- **We test every form end to end** into your dashboard's CRM, then remove the test.
- **We keep your old website up** until the new one is live and checked.

- **We open your Omnikom dashboard** and show you around it.

> **You get:** your new website live on your domain, your dashboard login, and the launch check report.

Your Omnikom dashboard

- **Your own CRM, built in:** every enquiry from every form, sorted by what the customer asked for, with status, notes and export.
- **Post articles and blog posts** from your dashboard; they go live on your website, set up for Google.
- **Change the wording in your pages yourself,** and publish. Every change is checked before it goes live and can be undone.
- **Your numbers:** how often Google shows you, the clicks, the searches that bring people in, and your website's health and speed.

05 / 07

Get listed: we make Google and your directories point to you

- **We submit your sitemap to Google Search Console and Bing,** so every page is found quickly.
- **We set up or correct your Google Business Profile and start its verification.** Google's check (a postcard, call or video) can take a few days to a few weeks, so we start it early.
- **We make your name, address and phone match everywhere:** Google trusts businesses whose details agree.

- **We link your profiles to your new website:** the directories of your industry (for example Zillow and Realtor.com in real estate), Yelp, Apple Maps, Bing Places and your social pages. Where only you can edit a profile, we give you the exact steps.
- **We give you a simple way to ask happy customers for Google reviews.**

> **You get:** a verified Google profile (or one waiting on Google's check) and every listing pointing to your website.

---

06 / 07

Tune: one week of tracking and adjusting

- **We track the searches each page targets,** on Google and in AI answers, from launch day.
- **We adjust the pages and the targets** where Google shows the wrong page, or none.
- **What to expect:** Google takes weeks to months to settle on a new website. This week is for catching problems early and setting the right targets, not for page one.

> **You get:** the tracking report with the changes we made, and the targets to watch from then on.

---

07 / 07

Mentions and links: we build your reputation online

- **We find the websites that link to your competitors** and check which ones are worth having: associations, partners, local news and the directories AI tools rely on.
- **We get you listed and mentioned on the first ones,** and give you the steps for the ones only you can request.

- **We use clean methods only:** no paid link schemes, which Google penalises.

You get: a list of the mentions and links we won, and the next ones to go after. Mentions and links build over months, so this work carries on in the growth loop.

After the setup: the growth loop, free traffic first, ads last

Once the setup is in place, the loop begins. Every month we measure, improve and measure again, until your free (organic) results from Google and AI answers stop climbing. Only then do we recommend paid ads, so you never pay for clicks you could have had for free.

- **We measure:** your rankings, your mentions in AI answers, visits, calls and form enquiries, against the "before" snapshot.
- **We improve the pages that are close:** the ones on page two of Google, or named by AI tools for some questions and not others.
- **We add what is missing:** new place and service pages, answers to the questions your customers ask, and fresh content.
- **We keep winning mentions and links** from trusted websites in your field.
- **We tell you when organic is at its peak:** when the gains level off, we show you the numbers and plan ads on top, aimed at what organic cannot reach.

You get: a monthly report in plain words: what moved, what we changed, and what comes next.

What we need from you

WHAT	WHEN
Access to your domain, Google accounts and listings (you add us as a user; never send a password)	step 1
Your photos, logo, reviews and the facts about your business, licences included	step 2
The places and services you want customers from, and who receives your enquiries	step 2
Your written approval of the wording and legal pages, after your lawyer's review	step 3
Your written OK and a date for the domain switch	step 4
Edits to the few listings only you can change, from our step-by-step guide	step 5

What is yours, and what we run for you

- **Yours:** your domain, your content, your enquiries (export them from your dashboard any time), your legal pages and the record of what each customer agreed to, and your listings across the web.
- **We run it for you:** the hosting, every deployment and Google Search Console sit on Omnikom's accounts, so updates, fixes and tracking happen without work on your side.
- **If you ever leave:** you get the full codebase of your website, and we keep it hosted exactly as it is.
- **You also keep:** the "before and after" of your Google results and AI mentions.

Not included

- Advertising spend (Google Ads, social ads).
- Your lawyer's fees, photography and video shoots.
- Fees charged by listing sites or industry bodies (for example paid directory listings or MLS fees in real estate).
- The growth loop after the setup: it is a monthly plan of its own.
- The AI voice agent that answers and calls your leads: an add-on you rent monthly. We set it up with your business profile and knowledge, connected to the CRM in your dashboard.
